

VDOM License Registration

Virtual Domains (VDOM) enable the FortiGate unit to split its resources and function as multiple independent units with common administration. A separate VDOM license is required.

1. Login to <https://support.fortinet.com> with account ID/email and password where the product is registered.

2. Enter the **license registration code**, select the end-user type, and click *Next*

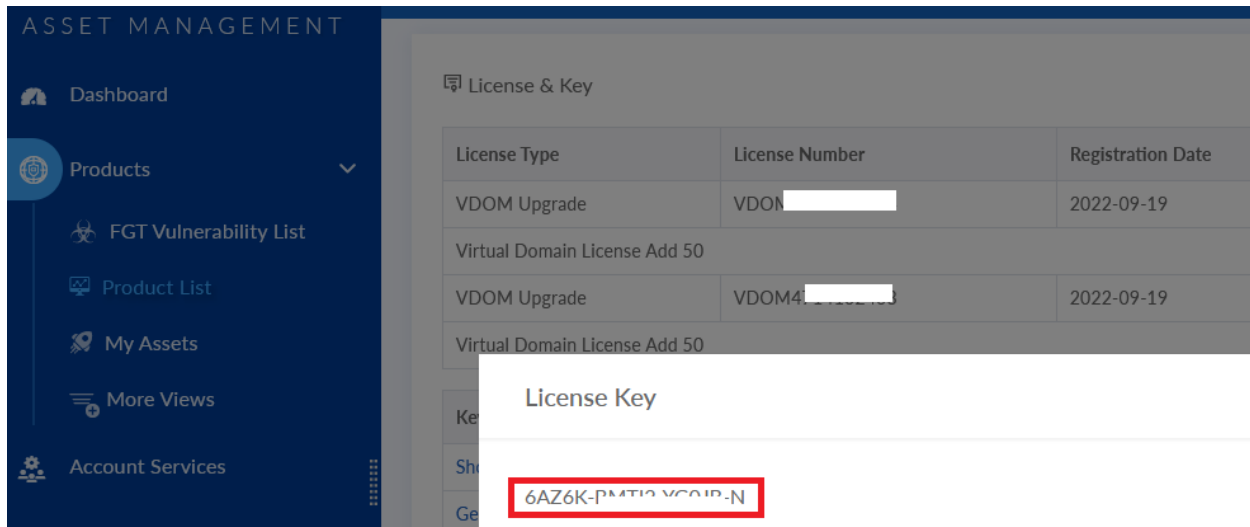

Note: Registration code can be found in the license letter received.

5. On the landing page, navigate to the 'License & Key' section and click *Show License Key*.

6. It is required to configure this VDOM key on the FortiGate GUI.

To activate a VDOM license from CLI :

The license can be applied using the following command:

```
# config global  
# execute upd-vd-license <license key>
```

If the command is not available, that means that the device does not support the VDOM license increase.

No reboot is needed when applying for a VDOM license. However, in an HA environment, the license needs to be applied to each unit.

To verify, execute '`# get system status`' and look for the below line.
Max number of virtual domains:
