

Veterans Program

Opportunities in Cyber Security

November 2015

Development of Cyber Warriors

Recruiting and retaining qualified cyber security professionals is a challenge for most Managed Security Service Providers and Security Technology Integrators.

Today, the security operator unemployment rate is 0.065%, amongst post 9-11 Veterans it is over 10%. The Fortinet Veterans Program focuses on changing those statistics and increasing the development of cyber warriors to defend critical infrastructure – and your customer’s networks!

The goal of the program is to introduce veterans to the cyber security industry and capitalize on synergies between transitioning military professionals and the cyber security and managed services business. High caliber individuals will be selected and granted Fortinet training and professional networking among our partners.

This is not a traditional internship or employment program, the intent of the program is to help connect exceptional transitioning Veterans with Fortinet Partners who have potential opportunities in the Cyber Security Industry.

Andrew A. Adrian | Veteran Team Lead
Program Administrator | MSSP Team

Stephen M. Fraser | Mentor - Veteran Team
Sales Operations Administrator | MSSP Team

We welcome all interested veterans and Fortinet partners to contact us at veterans@fortinet.com with any questions.
